

Inspirational Lighting Design

The art, science and magic of light

This seminar looks at lighting design in the residential sector. It explores how architects and lighting designers can work together to deliver controllable and energy-efficient lighting schemes. There is a focus on understanding and getting the most from LED. This seminar is very visual, draws on a number of case studies and will enable you to understand the following issues.

- The psychology of light
- The shifting lighting landscape with regard to regulatory and technical elements and the market forces that are shaping the residential lighting design sector
- The most frequently used light sources and their characteristics and applications
- The structure for lighting design for residential applications
- The key features and benefits of lighting control systems to manage energy efficient lighting
